

You're invited.

Enhancing Health Sciences Education with Mobile Technology

Come to this hands-on event to see how faculty and students are using mobile devices and digital content to create, collaborate, innovate, and communicate across health sciences programs. Hear how Apple products are advancing student training and enabling faculty to prepare students for health care careers.

- Discover how classroom and clinical experiences change with mobile access to information.
- Explore apps that are enhancing medical education, remote patient monitoring, electronic medical records, imaging, and clinical reference.
- Learn how iPad is helping today's health care professionals greatly improve provider-patient communication.
- See how Mac and easy-to-use tools such as iLife and iBooks Author enable faculty to create interactive learning materials.
- Find out how instructors are using iTunes U to deliver health sciences course materials that students can access on iPad.

Don't miss this opportunity to discover how Apple products can enhance health sciences education.
