# Enhancing Computer Science and App Development with Mobile Technology

Come to this event to see how Apple products are advancing student learning and enabling faculty to prepare students for careers in computer science and app development.

- Hear how worldwide demand for Mac and iOS devices and apps is creating unprecedented opportunity for student developers.
- Explore developer tools from Apple, including the easy-to-use Xcode development environment and iOS and OS X software development kits.
- See how colleges and universities are using Apple developer tools to create revolutionary mobile apps.
- Learn about resources such as the free iOS Developer University Program that support student developers and app development education.
- Discover how easy-to-use tools such as iBooks Author and iTunes U enable faculty to create and distribute interactive learning materials.

**Don't miss this opportunity to discover how Apple products can enhance computer science education.**
